GoHost

Company Profile

IT supply, web development and software development

ESTABLISHED 2019

Karoi, Zimbabwe

COMPANY OVERVIEW

About GoHost

GoHost is a technology business based in Karoi, Zimbabwe. We help customers source devices, build a web presence and develop software for everyday operations.

Our story

We started in 2019 as a web development company. We expanded into IT supply to serve customers who also need computers, mobile devices and connectivity hardware.

Who we serve

We work with individuals, small businesses and organisations. Typical needs include replacing a work laptop, equipping an office, launching a website and moving a manual process online.

Our team

The GoHost team brings together sales and technical work. Our sales team responds to enquiries, helps customers compare devices and coordinates courier orders. Our technical team scopes, builds and tests websites and software.

Based in Karoi, serving Zimbabwe

Hardware can be delivered nationwide via courier. Website and software projects can be discussed and coordinated remotely.

DIRECTION

Vision, mission and values

Our direction reflects the needs of customers in Zimbabwe, from finding technology within a budget to building digital tools that are practical to use and maintain.

Vision

To become a trusted Zimbabwean technology partner, helping people and organisations access dependable devices and digital services wherever they operate.

Mission

To supply suitable IT equipment and build websites and software that solve practical problems. We focus on clear specifications, agreed project scope and solutions suited to each customer's budget and working environment.

Clarity

Explain product condition, costs and project scope in plain language.

Practical design

Design around the devices, connectivity and day-to-day needs of the people using the service.

Accountability

Agree on what will be delivered and check the outcome against those requirements.

HARDWARE

IT supply and delivery

GoHost supplies technology for personal use, schools, businesses and office teams. We help customers compare models, configurations and condition before ordering.

Laptops

Business and everyday laptops, including used or refurbished models. Compare processor, memory and SSD specifications against the work you need to do.

Desktop computers

Desktop and all-in-one options for offices, reception desks and shared workspaces. Confirm the required performance, screen size and available configuration.

Mobile phones

New and used smartphones across multiple price points. Listings show available storage, memory and condition where confirmed.

Connectivity hardware

Starlink Mini hardware is available through the catalogue. Subscription and installation are separate.

Ordering and delivery

Browse the catalogue and open a product’s WhatsApp link. We confirm availability, configuration and courier arrangements before you proceed.

DIGITAL SERVICES

Web development

We build websites that explain what a business does and help customers take the next step, whether that is making an enquiry, browsing products or placing an order via WhatsApp.

Business websites

Present services, locations and contact information in a format that customers can navigate easily on a phone or computer.

Online catalogues and storefronts

Organise products into categories, display prices and specifications, and connect customers to the agreed ordering channel.

Landing pages

Create focused pages for a campaign, event or service launch, with a clear action for visitors.

Website updates and handover

Agree which content the client needs to update. Where the project calls for it, we can provide an editable setup and handover guidance.

Built for everyday browsing

We consider mobile layouts, image sizes and the amount of data a page needs to load. Contact and ordering options are designed around how customers already communicate.

DIGITAL SERVICES

Software development

We design and develop software around defined business processes. The scope can range from a simple internal tool to a web application with multiple users.

Workflow and job tracking

Track incoming requests, assign responsibility and make job status visible to the team.

Inventory and order tools

Record stock movements, capture orders and organise the information needed for routine follow-up.

Dashboards and reporting

Bring key operational records into one view so teams can track activity and prepare reports with less manual work.

Integrations and automation

Connect agreed tools or reduce repetitive data entry where the services involved support the required integration.

Start with one process

We map the current workflow, agree on the first release and test it with the people who will use it. Access, data handling and ongoing support are agreed during scoping.

BUSINESS PRIORITIES

Our goals

GoHost aims to grow its hardware and digital services while improving the day-to-day experience of customers across Zimbabwe.

Keep the catalogue accurate

Review prices, stock status and specifications regularly. Prioritise models customers enquire about and show condition clearly where it varies.

Improve nationwide fulfilment

Standardise courier booking, packaging and tracking. Monitor dispatch times and follow up on delivery issues.

Offer clearer website packages

Define the scope, handover and support options for business websites and online catalogues so customers can compare them before commissioning work.

Build reusable software modules

Develop and test modules for recurring needs such as stock tracking, job management and reporting. Adapt them where a client’s workflow requires it.

Use customer feedback

Review recurring questions and service issues to improve product information, website usability and software handovers.

CONTACT

Work with GoHost

Contact us to discuss an equipment order, request a quotation or outline a website or software project.
